

Small railroads

All plans to same scale,

10. Pittsburgh, Midvale & Ironton RR. Very sharp curve

Doubling back the main line gives the effect of a train going somewhere after it completes its yard switching. To build this in the space shown, a 15" radius curve must be used. This kind of plan is easy to combine into a bigger railroad you might build someday.

Ruled lines across plan are:
 6" apart in N
 9" apart in TT
 12" apart in HO
 18" apart in S
 24" apart in O
 See page 70 for more data.
